Farm Location:		

## **National Priorities Addressed**

Issue Questions		
1. Will the treatment you intend to implement using EQIP result in a considerable reduction of non-point source pollution, such as nutrients, sediment, pesticides, excess salinity in impaired watersheds with total maximum daily loads (TMDLs) where available, groundwater contamination or point sources such as contamination from confined animal feeding operations?		
2. Will the treatment you intend to implement for water conservation or irrigation efficiency using EQIP result in a considerable reduction in water use?		
3. Will the treatment you intend to implement using EQIP result in a considerable reduction of emissions, such as particulate matter, nitrogen oxides (NOx), volatile organic compounds, and ozone precursors and depleters that contribute to air quality impairment violations of National Ambient Air Quality Standards?		
4. Will the treatment you intend to implement using EQIP result in a considerable reduction in soil erosion and sedimentation from unacceptable levels on agricultural land?		
5. Will the treatment you intend to implement using EQIP result in a considerable increase in the promotion of at-risk species habitat conservation?		
6. Will the treatment that you intend to implement using EQIP result in considerable benefits to residue management, nutrient management, air quality management, invasive species management, pollinator habitat, and animal carcass management technology or pest management?		
7. Will the treatment that you intend to implement using EQIP result in energy conservation benefits?	Yes O or No O	

### **State Issues Addressed**

Issue Questions		
1. Will the project reduce the amount of nutrients/pesticides/salt/selenium or other pollutants entering ground or surface waters?		
2. Will the planned practice(s) promote water conservation on the contracted acres?		
3. Will the project address invasive and/or noxious plants on contracted acres?		
4. Will the project result in an improvement to the existing management system to meet the state AFO/CAFO regulations?		
5. Does the project increase the diversity of desirable plants on grazing lands?		
6. Does the project improve the health of riparian and/or wetland areas?		
7. Is the proposed project located within the State's NRCS wildlife priority area, and do the planned practices address the habitat needs of the targeted species designated in the wildlife priority area or is the plan designed for pollinator habitat?		
8. Will the proposed project reduce field soil loss to below "T" or will the planned practice(s) reduce irrigation induced/streambank erosion?		
9. Does the applicant meet one or more of the following conditions: a. Did the applicant successfully complete any past EQIP contract(s) in full compliance; b. If the applicant has an existing EQIP contract has it been, and is it now, on schedule and in full compliance; or c. Applicant has never participated in EQIP?		
10. Has any portion of the offered acreage been set aside or inventoried by a Cultural Resources Specialist or Archaeologist?		
11. Does the proposed project support organic transition (farming operation to be used while transitioning from conventional to organic production)?		

#### **Local Issues Addressed**

Issue Questions	Responses
1. Is the proposed project dominated by continuous Ponderosa Pine/Douglas Fir vegetation?	
2. Is the proposed project dominated by mixed conifer vegetation?	
3. Is the proposed project dominated by Lodgepole Pine or Open Ponderosa Pine Woodland vegetation?	
4. Is the proposed project dominated by deciduous vegetation?	
5. In the treatment area, is the surface vegetation dead and down woody material with wild grass or shrubs (includes immature trees up to 8' in height)?	
6. In the treatment area, is the surface vegetation wild grass or shrubs (includes immature trees up to 8' in height)?	
7. Is 50% or more of the treatment area made up of heavy ladder fuels (shrubs, immature trees and branches within 6' of the surface)?	
8. Is 20-50% of the treatment area made up of heavy ladder fuels (shrubs, immature trees and branches within 6' of the surface)?	
9. In the treatment area, is 50% or more of the slope greater than 30%?	
10. In the treatment area, is 50% or more of the slope 15-30%?	
11. Is the proposed project and associated practices part of an adjoining multi-landowner project?	
12. Is the purpose of the project to re-forest a landscape that burned more than 3 years ago?	
13. Is the insect and disease level within the treatment area "High Activity with tree loss"?	
14. Is the insect and disease level within the treatment area "Sporadic Activity and High threat or risk"?	
15. Is the insect and disease level within the treatment area "Sporadic Activity and Low threat or risk"?	
16. Is the insect and disease level within the treatment area "Not Active and High threat or risk"?	Yes O or No O
